1. Claims 1-16 are objected to because of the following informalities: independent claims 1,2,9 and 10 recite “a quantizer having an input that receives a value and having an output representing a quantized level containing said value” with no indication of where the “value” originates. It is noted that claims 17-24 specifically recite “a quantizer having **an input that receives said filter output signal** and having an output that **produces a quantized representation of said filter output signal**”. Appropriate correction is required.

2. Claims 17-24 are allowed.

3. This application is in condition for allowance except for the following formal matters:

See claim objections noted above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wang, et al 6,452,521 A mapping circuit coupled to the integrator circuit of a delta-sigma converter to map the analog input range of the integrator to the analog out-put range of the sensor. The integrator circuit provides an integrator output to a controller to generate a digital output, which is in a digital output range representing the analog input range. A sensor input circuit includes a sensor having an analog sensor output range. The mapping circuit is coupled to the integrator circuit and is
